THE AI RISK MAP · WORKING DRAFT

Eighteen ways AI could go

Eight areas of life, each with a hopeful and a worrying direction, plus two that fit nowhere. Every scenario gets both sides' case in their own words, every published probability, and one test: does it need new rules, or mainly explaining?

AREA	HOPEFUL DIRECTION	WORRYING DIRECTION
Health and biology	**Medical progress compressed into years** POLICY: ACT NOW	**AI-assisted biological or chemical attack** ENFORCEMENT PROBLEM
Work and income	**Broad productivity gains and cheaper goods** POLICY: ACT NOW	**Mass job loss and widening inequality** POLICY: ACT NOW
Science, energy and environment	**Faster discovery and cheaper clean energy** POLICY: ACT NOW	**AI's energy and resource demand outpaces its gains** POLICY: ACT NOW
Information and democracy	**Better shared understanding and forecasting** POLICY: ACT NOW	**Manipulation, fraud and collapse of trust** ENFORCEMENT PROBLEM
Security and infrastructure	**Defenders gain the advantage** POLICY: ACT NOW	**Cheap large-scale cyberattacks and critical-system failures** ENFORCEMENT PROBLEM
Power and governance	**Wider access and more accountable institutions** POLICY: ACT NOW	**Concentrated power or AI-enabled surveillance** ENFORCEMENT PROBLEM
Daily life, mind and meaning	**Personal tutors, care and freed time** POLICY: ACT NOW	**Over-reliance, lost skills and unhealthy AI companions** ENFORCEMENT PROBLEM
Control of advanced AI	**Powerful AI that stays aligned and overseeable** POLICY: ACT NOW	**Loss of control over advanced AI** POLICY: ACT NOW
Outside any domain	**AI disappoints: modest progress, investment falls** COMMUNICATE NEUTRAL	**Unknown, combined and slow-building risks** PREPARE AND WATCH

Policy: act now. An action both sides accept · Enforcement problem. The law exists, enforcement lags · Prepare and watch · Communicate
